MBA Generalist

The Meinders School offers students a wide variety of learning opportunities outside of the classroom. These enrichment activities provide valuable insights into the business world and augment traditional classroom study. These learning opportunities, such as industry visits, internships, and career coaching, focus on helping students develop strategies to reach their personal career goals. Through a series of professional development workshops conducted each semester, students also begin preparing for their careers after college.

The M.B.A. program consists of four different blocks of courses: environmental, functional, elective, and capstone. These required courses provide all M.B.A. candidates with a fundamental understanding of essential managerial skills and tasks.

The M.B.A. generalist program has been designed for students who are on the fast track and desire to gain a general understanding of the nature of business and essential managerial skills. This program may be completed by full-time students in one intensive year.
